Mean of G varieties	100	71.1	100	72.8	100	100
Late tetraploid Mean (G&S)	113	69.7	106	73.3	100	100

RGT BIJOU is a tetraploid variety that is both very adapted to grazing and cutting.

It has a very good disease profile, with a very good crown rust resistance.

VARIETY PROFILE :

Type
Tetraploid
Use
Cutting & Grazing

Persistence
5 years

Sowing rate
25-30 kg/ha

DISEASE RATINGS

(1-9, 1=poor, 9=good)

	RGT BIJOU
Crown Rust	7.8
Drechslera	6.5
Mildew	6.9

AGRONOMIC RATINGS

	RGT BIJOU
Ground cover % [2 nd harvest year]	68
Ground cover % [3 rd harvest year]	61
Autumn ground cover [1-9]	6.0
Winter Hardiness [1-9]	7.3
