BIOFUM AUTUMN is a blend containing deep tap-rooting varieties that produce high levels of green manure. It has a long and efficient uptake of nitrogen due to its long flowering period and deep roots. It produces a wide range of glucosinolates, enabling an effective reduction of soil-borne pathogens and nematodes (can reduce PCN by up to 42% per year). It is ideal for early drilling and autumn incorporation. Allow 10-14 days post incorporation before drilling the next crop.

<b>Early vigour</b>	Fast establishment
<b>Flowering</b>	Approximately 60 days after planting
<b>Plant height</b>	Can reach over 140cm
<b>Main glucosinolates</b>	Sinigrin, Glucoraphanin, Gluconapoleiferin, Glucotropaeolin, Glucosinabin
<b>Seed density</b>	13-15 kg/Ha
